Election/Restrictions

1. Applicant's election without traverse of claims 2-5 (claim 1 has been cancelled) in Paper No. 6 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 2-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Takasaki U.S. Patent No. 4,969,201.

Regarding claim 2, Takasaki teaches a method of identifying an important point in a scribble between a first point in said scribble and a second point in said scribble, said first point not equal to said second point and said first point not equal to said important point and said second point not equal to said important point (FIG. 3), the method comprising the steps of:

- a. Finding a third point on the scribble between said first point and said second point, such that the distance between said third point and a postulated line (line connecting point together) extending through said first point and said second point is equal to or greater than the distance (column 4, lines 40-44) between said postulated line and any other point between said first point and said second point (please refer to FIG. 4 and column 4, lines 28-68 for an extensive coverage of this limitation);
- b. Identifying said third point as an important point if the distance between said third point and said postulated line meets predetermined criteria (column 5, lines 1-4).

Application/Control Number: 09/782,445

Art Unit: 2623

Referring claim 3, Takasaki teaches the method wherein said predetermined criteria includes comparing said distance between said third point and said postulated line to a constant value (column 6, lines 12).

For claims 4-5, please refer back to claim 2 for further explanation.

CONCLUSION

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following patents are cited to further show the state of the art with respect to determining point and distance between points:

- U.S. Pat. No. 5,546,476 to Mitaka, teaches shape recognition.
- U.S. Pat. No. 5,606,629 to Shirakawa, teaches figure recognition apparatus.
- U.S. Pat. No. 5,633,955 to Bozinovic, teaches method of connecting shapes on a display of a computer system.
- U.S. Pat. No. 6,208,757 to Sinden, teaches method for reconstructing handwritten symbols from parametric representations thereof.
- U.S. Pat. No. 5,610,996 to Eller, teaches method for arc segmentation in handwriting recognition.
- U.S. Pat. No. 5,623,555 to Nelson, teaches method for handwriting decompression using estimated timing information.
 - U.S. Pat. No. 6,101,280 to Reynolds, teaches method for compression of electronic ink.
